

Pilots, help us to eliminate the interference of 5G networks with the radio altimeters

The new 5G systems operating in the 3.7-3.98 GHz band may cause harmful interference with the aircraft radio altimeter systems operating in the 4.2-4.4 GHz band.

Prague Airport respects the safety zones and precaution zones specified by the [French Civil Aviation Authority DGAC](#) and keeps them free of any 5G transmitters.

Anyhow,
pilots are kindly asked to report any radio altimeter issues @LKPR to safety@prg.aero.
